

## Providing solutions for your septic system

We understand the challenges and ensure your peace of mind.

### Are you prepared?

**Proper design and construction of the septic system is key for a functioning septic system.**

The construction of a septic system raises a lot of questions that need to be answered.

- Is the property suitable to accommodate a septic field?
- What is the right disposal system?
- What permits are required?
- What are the costs for a septic field?
- Who can build the septic system?
- How do I operate and maintain a septic system?

### How do I get the questions answered?

Septic systems must be designed, constructed and maintained in compliance of the Sewerage System Standard Practice Manual. Design and construction must be done by or under the

supervision of an Authorized Person as defined in the manual.

HBHE can help you with all of these challenges the septic system involves, starting with the right piece of property. We provide design and consulting services for septic design and facilitate in the permitting process. We start with a free site visit, gathering required information. And providing information on the requirements for a septic field.

We help to find the right contractor for the construction and provide services for construction supervision and inspections as required in the regulations.

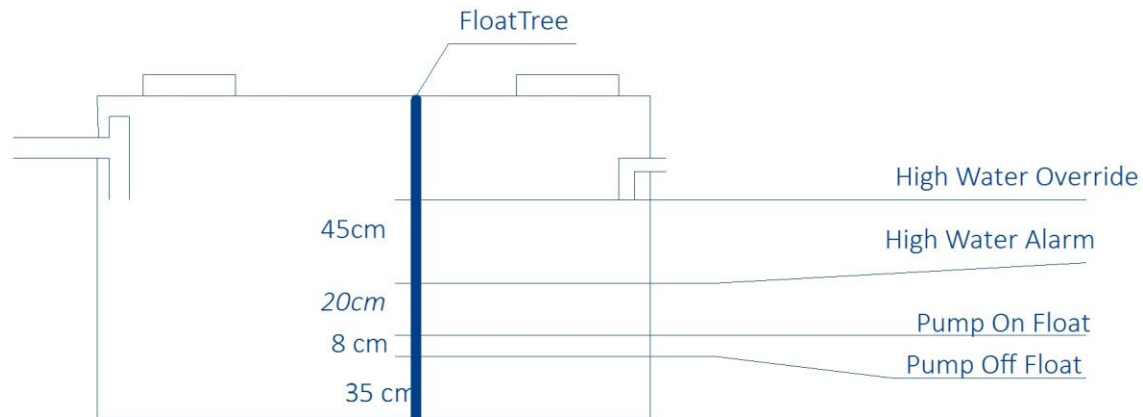

We provide an operations and maintenance manual for the septic system.

*Our goal is your comfort*
